Cerno Bioscience Signs Agreement with Lumiere Technology Ltd. to Distribute MassWorks in China

Chicago, IL., (January 2, 2007) – Cerno Bioscience announces a collaboration with Lumiere Technology Ltd, the international distributor of advanced laboratory analysis equipment. This agreement will see Lumiere Technology distributing Cerno Bioscience's award-winning MassWorks™ MS (mass spectrometry) data software in China.

Lumiere Technology Ltd. is founded and staffed by chemistry and biotechnology professionals with over 15 years' experience in the GC/MS and LC/MS business. Headquartered in Beijing and with a wide network of offices in key regions, such as Shanghai, Shenyang and Xi'an, the company is in an ideal position to make the MassWorks product widely available to MS users across China. Lumiere Technology has also been representing Thermo Fisher Scientific (formerly Finnigan) MS product lines in China since 2001 which has become the largest MS and analytical equipment supplier in China.

At present, economical, user-friendly single and triple quadrupole MS systems are experiencing over 15% AGR (aggregate growth rate) in the Chinese marketplace. These instruments, however, are specified to provide only indistinct mass accuracy, lacking the high mass accuracy capability of a high resolution system for high fidelity compound identification. Cerno's award-winning MassWorks can improve the mass accuracy of single and triple quadrupole MS systems by up to 100x, significantly improving the ability to identify various compounds, at only a fraction of the investment for high resolution MS systems. By utilizing Lumiere Technology's widespread networking capability in China and their many years of expertise in the MS industry, Cerno can now offer the benefits of MassWorks to users in the Chinese biopharmaceutical and environmental sectors.

"MassWorks is a truly unique product that can significantly enhance the capabilities of rudimentary, commercial mass spectrometers." comments Ms. Xiaohong Lu, Executive President of Lumiere Technology Ltd. "In China, the uptake and projected growth of such instruments has been astonishing. We hope to exploit our knowledge, experience and extensive distribution network to reach every MS user in China."

For more information on MassWorks, please contact Cerno Bioscience at info@cernobioscience.com, call +1 203-312-1150, or visit www.cernobioscience.com. To contact Lumiere Technology Ltd., please visit www.lumtech.com.cn

About Cerno Bioscience LLC

Cerno is dedicated to the practical application of modern mathematical techniques to Mass Spectrometry for the purpose of improving the quality, accuracy and reliability of MS analysis. These techniques can be used to dramatically improve the amount of information obtainable from and reduce the amount of time required of many MS experiments. Cerno's technologies are proprietary and protected through numerous patents granted and submitted world-wide. The company was founded and is staffed by a team with over 80 years' experience in the fields of instrumentation, mathematical data processing, life science applications and biotech business development. Cerno is funded by a private investment group with an established track record of success in the Analytical Instrumentation market.
